The Project

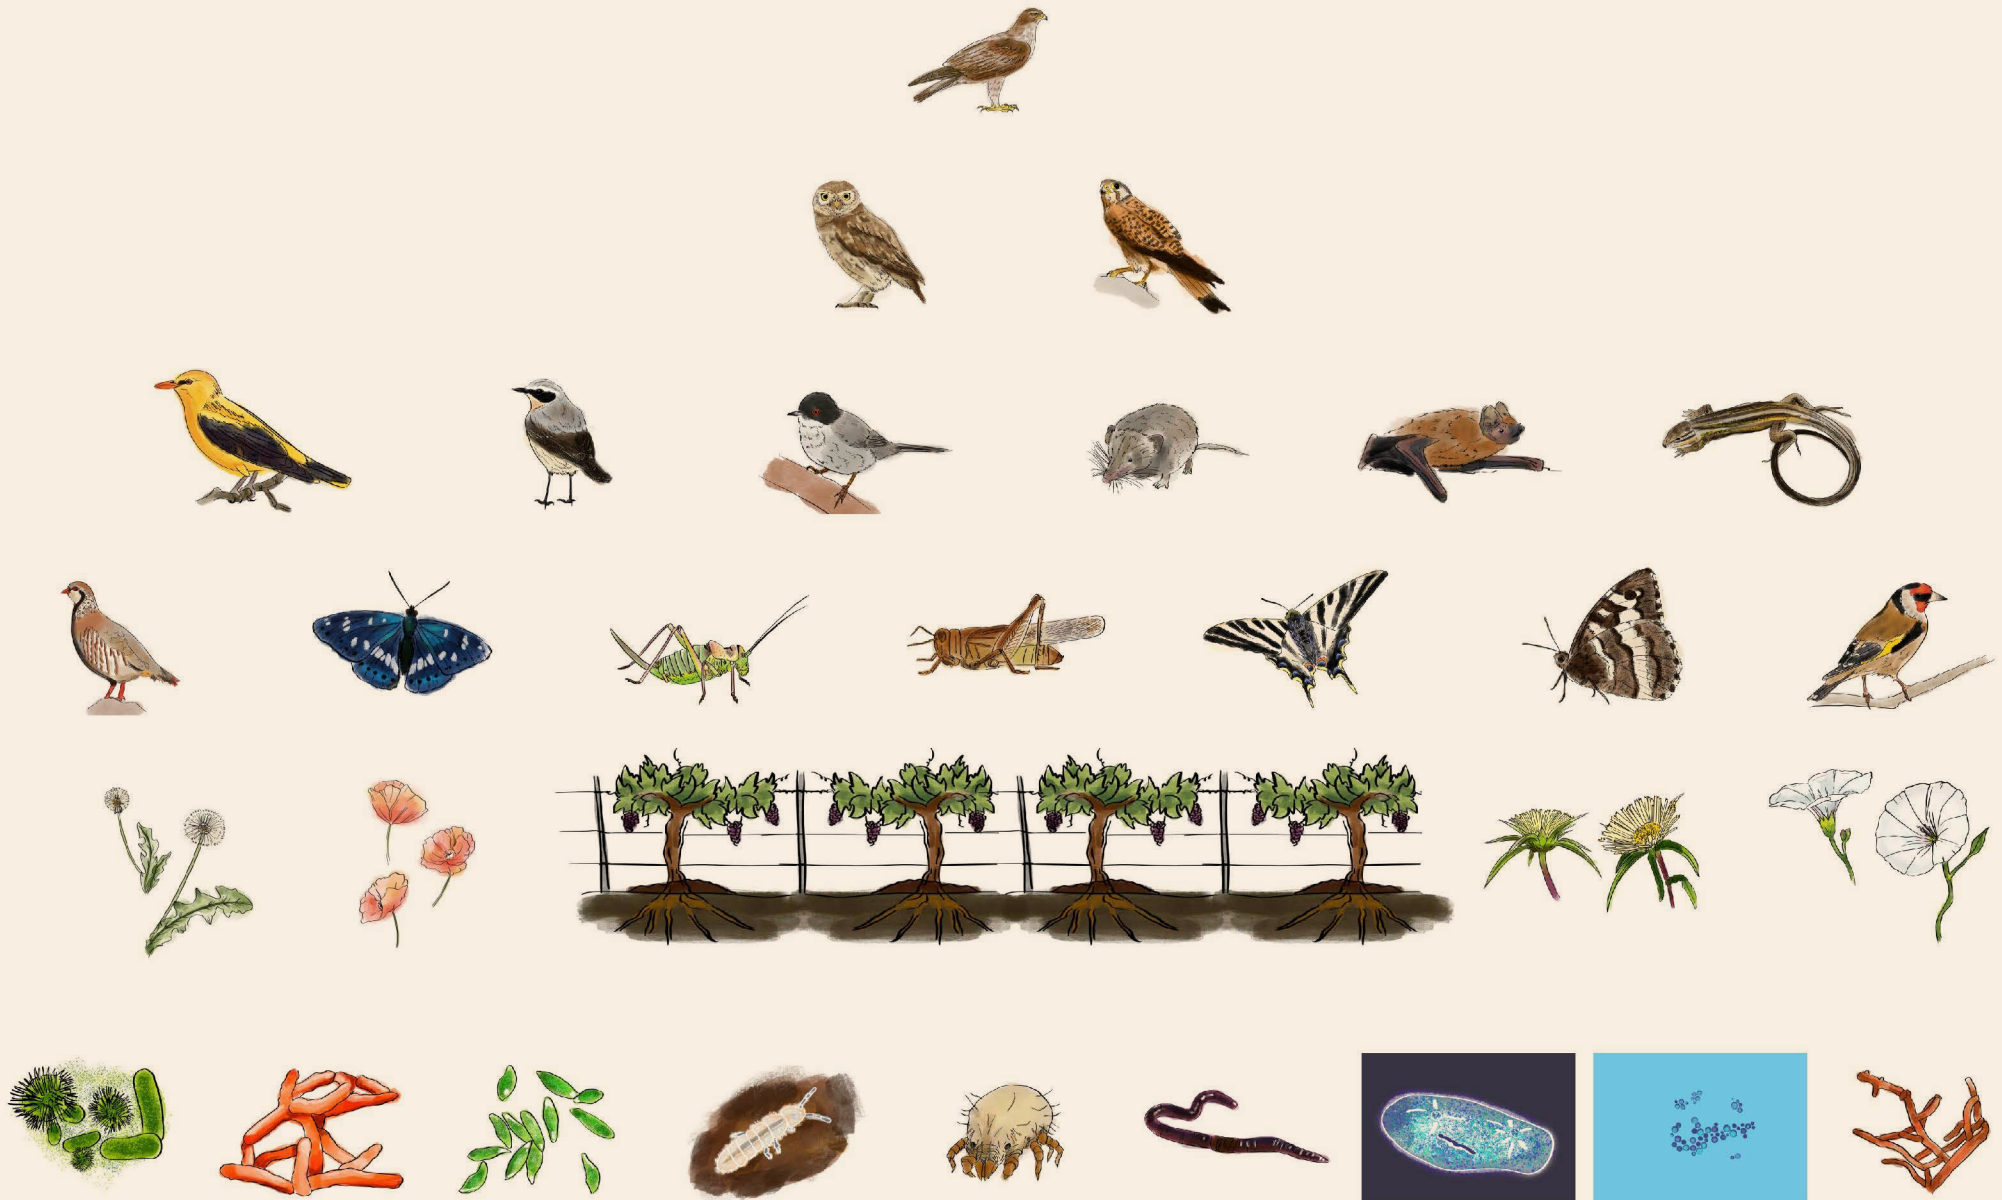

1 Different Bio Sector

Our plots, the variety of grapes, and other interesting information.

2 Ideal Ecological Pyramid

Helps to understand how all living things are connected.

3 Birds and Habitats

Its presence increases local biodiversity,
as it attracts more wildlife.

They are insectivorous animals, so
they are a great help in pest control.

4 Use of Pheromones

The grapevine moth can cause a lot of damage, so we use this technique to control pests.

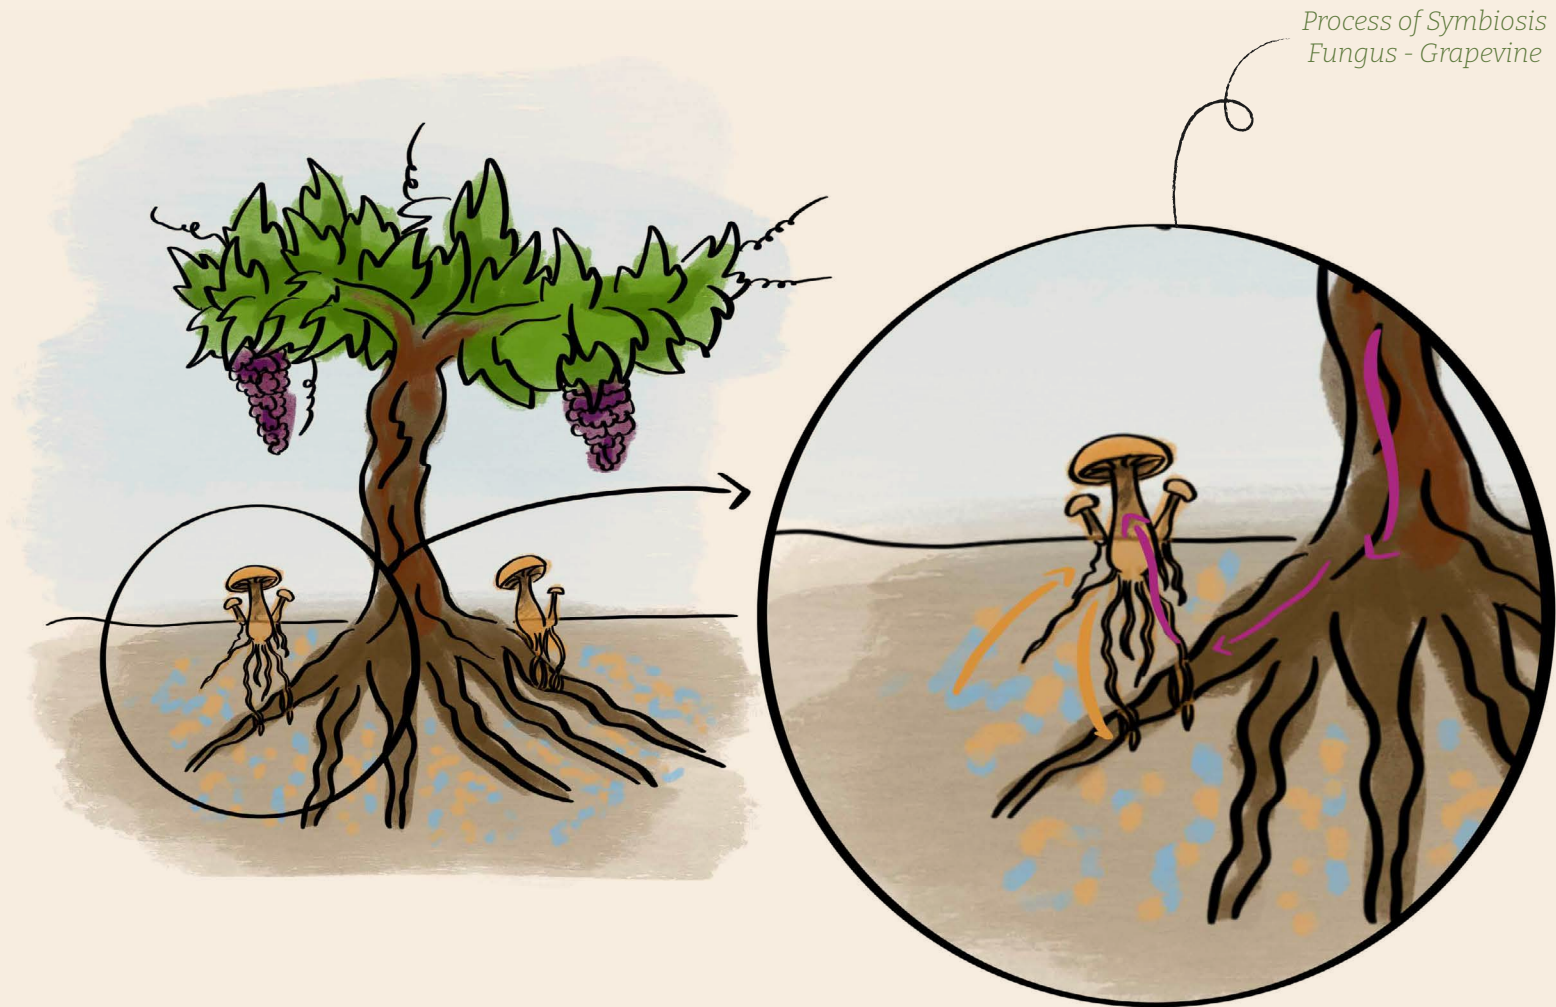

Pheromones

Lobesia Botrana
(Grapevine Moth)

5 Symbiosis

The life underground and the small living organisms like the fungus. They are the web. Certain types of fungus will integrate a plant via its roots and start the process of symbiosis.

6 Biochar

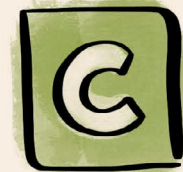

Biochar is the product of pyrolysis, a thermal process that allows us to upcycle our vine cuttings. It retains water, air and nutrients.

Biomass
(Pruning residues)

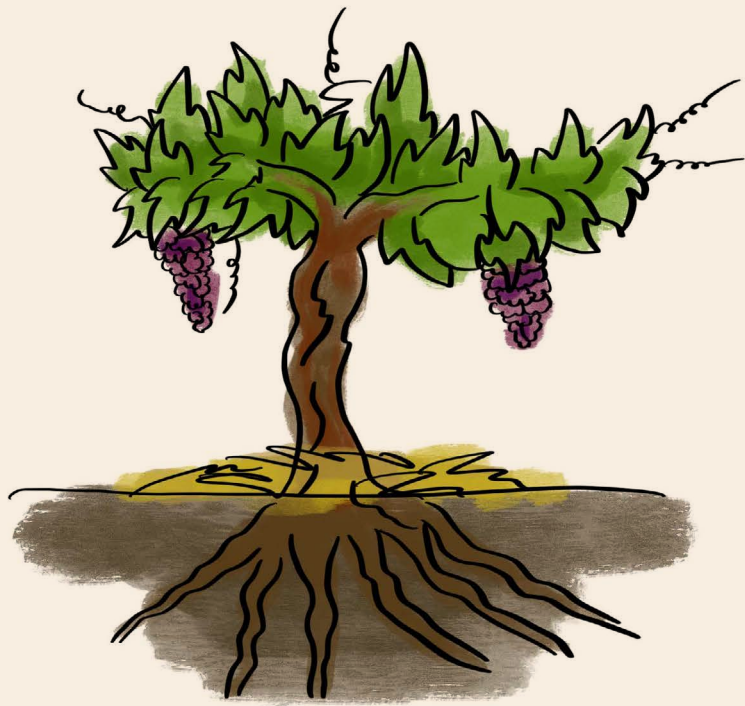

Pyrolysis

Biochar

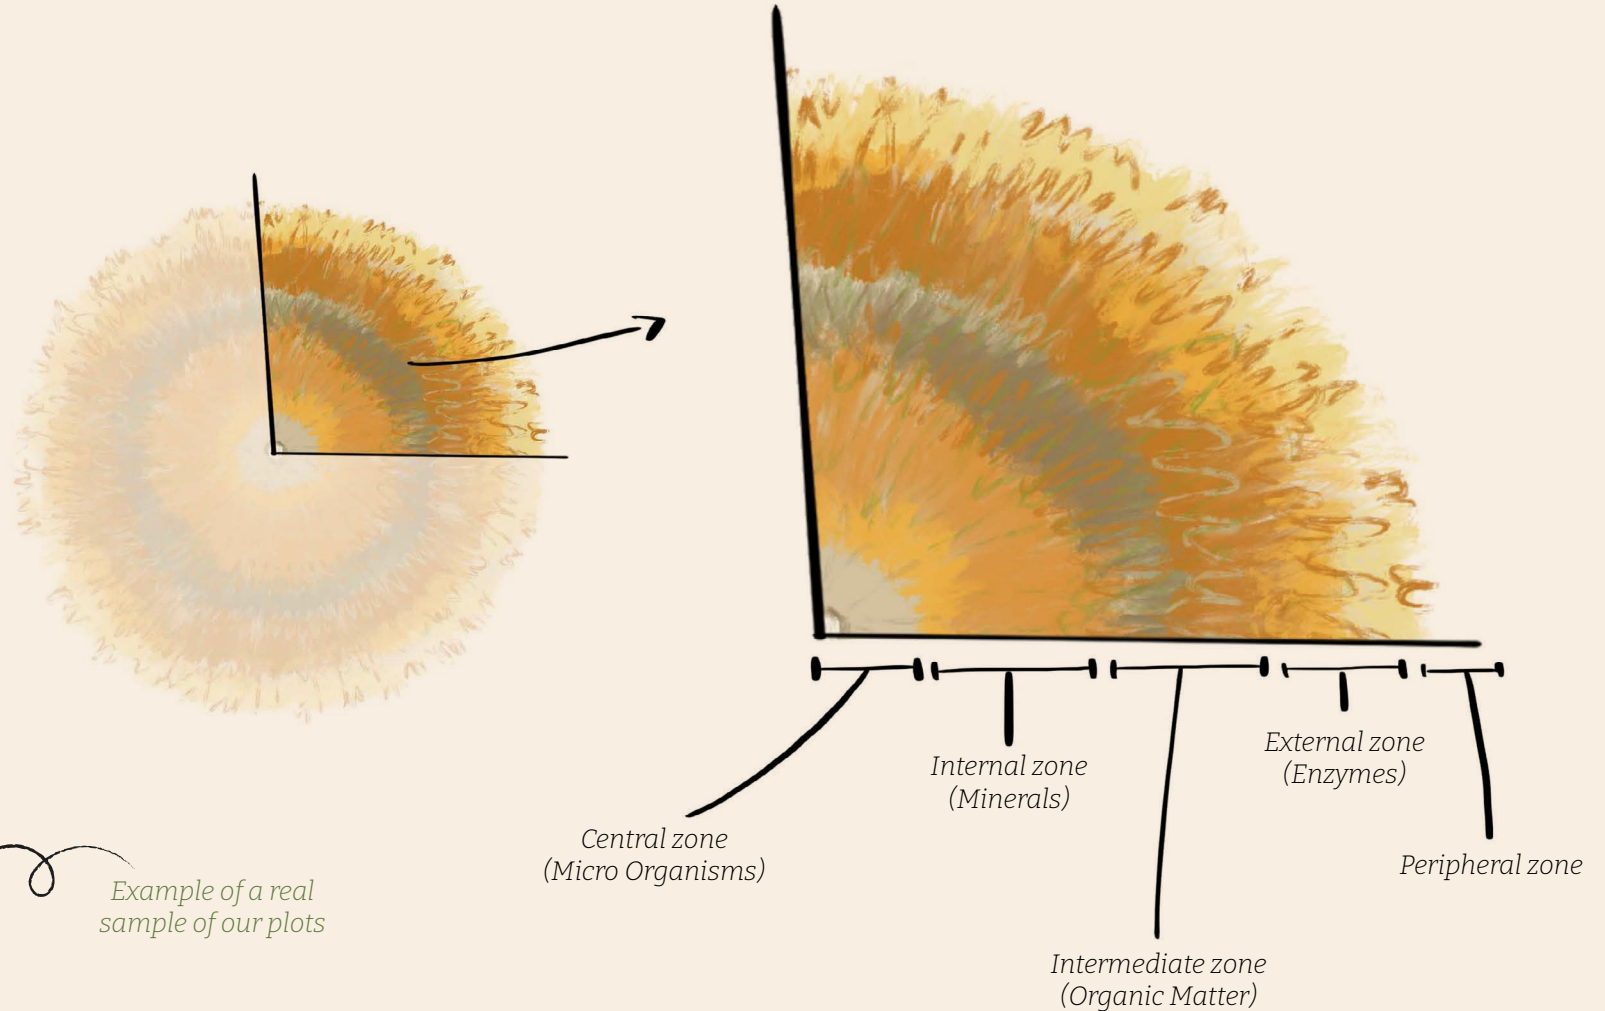

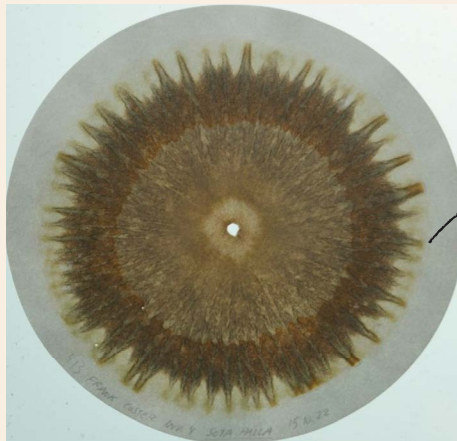

7 Use of Straw

Releases nutrients into the soil.
Improves soil structure.
Provides food for the vine plants.
Increase of organic activity.

8 Chromatography

Soil chromatography is an analysis technique very important to know the soil conditions, so we can obtain better results in our crops.

9 Butterfly Inventory

Butterflies are a great indicator of a balanced and well-maintained ecosystem. At the beginning of our butterfly inventory, we counted a total of 8 species. Today, we exceed 40 species.
